

# A SMALL SOUVENIR OF THE RAMPART CONSTRUCTION SITE

*July 1st to 12th 2024*

## IT'S DAY 1

Our young men, Marc and Henri, are learning how to erect scaffolding with Frédéric from the Jeandin company. Beforehand, they had cleared the brush from the north wall of the chapel. Everything is set up, including the signs, and we can begin the work.

## DAY 3, MORNING

A visit from the heritage architect to provide site guidelines and analyze the materials discovered.

Alain (on the right in the photo), a volunteer with the association, is actively participating in the construction project.

We had enlarged (to A3 format) the old postcards of the chapel. It was from these photos that the reflection began.

## THE FOLLOWING DAYS

Discovering the bread oven.

Marc continues removing stones to clear the oven.

After the bread oven, Alain discovered the old pipe. In this photo, Philippe, the Rempart facilitator, is clearing the site.

The complete updated staircase.

Learning about mortar

Work has begun on the chapel door.

Which stone needs to be cut to put it back in this location?

The cutting of the stones began

It's very hot and we need to continue working in the shade.

The vault has been reconstructed. It's a magnificent piece of work!!!

**Thanks to Henri and Marc, to Alain, Philippe and Frédéric**

For two weeks, our young people worked from 8:30 a.m. to 5:00 p.m., Monday through Friday. Visits to various locations in Sennecey were organized in the evenings after the

workday. Over the weekend, Henri and Marc were taken to Cormatin Castle, the Azé Caves, and Cluny. Henri, Philippe, and Alain even went to see the Tour de France cyclists pass by.

**End-of-construction party: everyone was spoiled.**

The adventure continues in summer 2025 with another Rempart project.  
But several community service days will be offered beforehand.  
Calling all enthusiasts!
